Skills

Programming Languages: Python, Java, Bash, C++
Systems & Infrastructure: Linux/Unix , Docker, AWS (EC2, S3, Lambda) , CI/CD (GitHub Actions, Jenkins pipeline)
Observability & Monitoring: Grafana, Prometheus, logging, alerting
Networking & Core CS: TCP/IP, DNS, HTTP/HTTPS, Load Balancing, OS internals, Distributed Systems, Fault Tolerance
AI, Machine Learning: OpenCV , YOLOv8 , TensorFlow , PyTorch , Scikit-learn , Neural Networks
Backend: RESTful APIs, Microservices, Java , Scalable Backend Systems
Databases & Storage: SQL, Postgres SQL, MongoDB
Automation & Orchestration: Python scripting, N8N (workflow automation)

Professional Experience

Junior developer Intern | Ask Lumen AI (04/2026 - Present)
• Built **RAG-based LLM pipelines** using LangChain and vector databases, improving response relevance by ~30% and reducing hallucinations
• Developed **scalable full-stack features** (React, Next.js, Node.js, Express), supporting **real-time AI interactions for 100+ users**
• Designed scalable system architecture for real-time AI interactions, ensuring high availability and efficient resource utilization
• Optimized inference pipelines, reducing latency by ~50% and improving system throughput for real-time applications

AI Orchestration Intern | ZUDU AI (12/2025- 04/2026)
• Designed **LLM-based agent workflows** using modular Python architecture, improving system scalability and maintainability
• Built **multi-step automation pipelines** integrating APIs, databases, and tools, reducing manual intervention by ~40%
• Improved response accuracy by ~25% using prompt engineering, tool calling, and memory optimization
• Reduced inference cost and latency by ~30% through pipeline optimization and caching strategies
• Deployed production-ready AI services with fault-tolerant design, handling real-world queries and workflows

Amazon ML Summar School (virtual) (10/2025 - 10/2025)
• Selected among the top 5% of applicants nationwide for Amazon’s highly competitive ML Summer School. Gained strong foundations in Machine Learning, Deep Learning, Natural Language Processing (NLP), and Recommender Systems.
• Learned directly from Amazon scientists and ML engineers, focusing on industry-grade problem solving. Worked on hands-on assignments and case studies, applying concepts like model evaluation, optimization, and real-world ML trade-offs.

Education

Karpagam Institute of Technology 2022 – 2026
B.E - Electronic and Communication Engineering Coimbatore, India

Projects

Stress-Aware Vehicle Speed Control System | CNN, KNN, OpenCV, IoT (02/2026 - 04/2026)
• Developed **real-time multimodal ML system** combining facial recognition and physiological signals
• Achieved ~97% **accuracy** in stress detection using CNN + KNN hybrid model
• Integrated IoT sensors (ESP32, MAX30100) for **real-time data processing and automation**

RE-DACT | NLP, OpenCV, ML (06/2025 - 07/2025)
• Developed a privacy-focused tool to automatically detect and redact sensitive data in text, images, videos, using NLP and ML.
• Implemented customizable levels and a dual-view system for accurate comparison of original vs. redacted outputs.
• Enhanced protection of PII and confidential data across domains such as finance, healthcare, and government.

LeadSync|LLM,Python (04/2025 - 05/2025)
• Automated email parsing using IMAP protocols to extract content from incoming mails without manual intervention.
• Integrated an LLM-based classification pipeline to distinguish between potential leads and business opportunities, improving lead triaging accuracy.
• Enhanced lead management by 30% with automation.

Certificates

• Java Data Structures and Algorithms – NPTEL (Indian Institute of Technology)	• ProblemSolving in Python – HackerRank	• Prompt Engineering – OpenAI / DeepLearning.AI
• C++ For Competitive Coding	• Cloud Foundations course - AWS Academy
